STATIONARY

HELICOPTER DIP SOURCE & CISTERN

While our patented HeloPod® brings full tactical mobility - 9 out of 10 units end up as permanent water supplies, because they're just *that* easy and cost-effective to install and get In-Service.

Rotors overhead, stationary water supply on standby—ready for “Initial Attack.”

MANUFACTURED VS. ON-SITE CONSTRUCTED INFRASTRUCTURE

- Manufactured HeloPod® deliver a 4:1 cost advantage
- Dip sites In-Service usually in 90 days or less
- Virtually zero budget overruns or delays getting In-Service
- Rapid fabrication & deployment—scale up on demand
- Minimal site preparation—just level & extend water supply
- Zero permits. Zero construction management or headaches
- All HeloPod® components contained in built-in cabinet

SITE PREPARATION AND DIP SITE BASE

CONCRETE SLAB • CONCRETE FOOTINGS • ASPHALT

Gravel base for dust control

WATER SUPPLY CONNECTION TYPES

Does not require a back-flow preventer*

HeloPod's exclusive snag-free Air-Gap sits below the top rim of the tank and includes an integrated spillway.

HARD PIPE PLUMBED • FLEXIBLE SUCTION FOR SEISMIC • FIRE HOSE

*Round Tanks require Back Flow Preventer

REMOTE ACTIVATION METHODS

We suggest **SCADA** System controlled by water agencies

Patented, encrypted, and redundant cellular and satellite communications—using a secure web portal
